FILIPINAS

## Sismo de magnitude 6,8 nas Filipinas provocou quatro mortes

O epicentro registou-se a cerca de 61 quilómetros da cidade de Davao, na ilha de Mindanao, no sul das Filipinas. Uma menina de seis anos morreu depois de um muro ter desabado.

### Make photo in the form of ▲ ▼ different geometric shapes online

To make a picture of a certain geometric shape, you need to specify it on your computer or phone, enter the number of the shape you want in the settings, click OK button at the bottom of this page, wait a few seconds and download the ready result. If necessary, in the settings you can specify that part of the image where, for example, there are faces. For vertical photo of people, in most cases, is suitable "top" part (by default is used central part of image).

Examples of pictures in the form of a **circle**, **triangle** and **star**, made from the usual photo of rose on this website:

**Circle** (round) picture is made with all default settings.  
Wide **triangular** picture is made with these settings: "Number of the desired shape" – "1", "Snap dimensions to" – "size of the original image".  
To create a picture in the form of a five-fingered **star**, the parameter "Number of the desired shape" must be set to "4".

Table with numbers of different shapes for their specifying in the settings:

Geometric shapes							
# 1. Triangle	# 2. Circle	# 3. Pentagon	# 4. Star five-pointed	# 5. Hexagon	# 6. Octagon	# 7. Dodecagon	# 49. Square

[show 100 different shapes on this page >>>](#)

The original image does not change in any way. You will be given other processed image.

1) Specify image in BMP, GIF, JPEG, PNG, TIFF format:

Escolher Ficheiro Não foi escolhido nenhum ficheiro

2) Settings to apply the specified shape

Number of the desired shape: 2 (from the above examples, 2="circle")

Snap dimensions to: aspect ratio of the specified shape

Use: central part of image

Rotate shape by: 0 degrees (if necessary, you can rotate picture)

Flip shape  (swap right side with left)

Invert processing  (for example, instead of a circular picture will be made)

3) Output image format

JPEG standard with quality 92 (from 1 to 100)

PNG-24 (without compression, with transparency support)

OK

Processing usually lasts for 0.5-20 seconds.
